SINGAPORE-based Beyonics Technology Ltd's newly-opened industrial campus at iPark @ Indahpura in Kulajaya, Johor, marks a new beginning for growth and expansion in precision manufacturing.

Beyonics is owned by ShawKwei & Partners, a private equity firm investing in middle-market companies with operations in Asia.

The company, which manufactures high-technology electronic products, precision plastics, and precision metal components, invested US\$10 million (RM42.2 million) to build the campus.

The iPark campus represents the company's first site in Malaysia that integrates electronics manufacturing with aluminium die-casting and precision machining in one location.

Beyonics had embarked on a major re-branding and strategic alignment exercise with the focus on making high reliability components for the medical and automotive sectors.

It had strategically aligned its 12 manufacturing sites across the region to five with two each in Johor and Singapore, and one in

Changshu City in China.

The 288,000 sq ft facility in Johor was opened by Deputy International Trade and Industry Minister Datuk Lee Chee Leong last month.

Beyonics Technology Pte Ltd chief executive officer Michael Ng said the opening of the facility was transformational for the company, and set the stage for a new era of development.

"It is the result of detailed planning and focused investment to enhance our manufacturing capabilities, and at the same time also highlight the incredible progress Malaysia has made as a global leader in clean and green industrial park design," he said.

This is an integrated campus with efficient access to nearby road and port links.

The current footprint is substantial, and the firm has the opportunity to double the capacity with the availability of adjoining land space.

Beyonics's investment and move to iPark is just one example of the company's growth strategies.

By the end of the year, it would have completed the refurbishment of its Marsiling facility in Singapore.

The company is in the process of upgrading all Beyonics sites across the region.
